

Dust Control

A water based treatment designed to encapsulate dirt on all dust mops, entrance mats and carpeting.

Frequently Asked Questions

Q. Why do I need a dust control product?

A. Dust mop treatments are designed to help hold dirt to the mop surface. A treated mop will be more effective than a non-treated mop.

Q. Why should I use Zing Dust Control?

A. Zing Dust Control is water based and designed to flocculates the dirt that it picks up. This means that the dirt sticks to itself and to the mop. Do a test, dust mop an area with an untreated mop and then mop the same area with a Zing Dust Control treated mop and see how much more dirt you remove after treating the mop. You will find that most dust mop treatments are oil based. We have found that not only can this make the floor slippery it can discolor the finish also from the oily residue left behind from the oil based treatment.

Q. Why should I use Dust Control on my entrance mats and carpeting?

A. Since Dust Control is water based it is perfect for entrance mats and carpeting throughout a home or building. When someone walks on the surface of the mat or carpeting, any dirt they track will stick to itself (flocculates) and fall into the carpet or mat and removed the next time you vacuum.

Q. How do I dilute Dust Control?

A. Dust Control is ready to use. Packaged 6 quarts per case and trigger sprayer.
